

Please make the following changes to the Abstract:

ABSTRACT

The invention relates to handling messages containing landmarks, or landmark related services on a mobile communication terminal. The landmarks are handled by using a message for transmission through a wireless cellular communication network, with a syntax that ~~comprises~~includes a header part for defining sender/receiver message nature, an identification part for identifying the service, a landmark part for containing location information of one or more objects and a provisioning part for indicating a desired service.
